Where am I going?

By the end of the Astronomy Unit,
I Will Be Able To define & answer the following:

Before

Meteor
Asteroid
Comet
Waxing
Waning
Lunar Eclipse
Solar Eclipse
Polaris (North Star)
Solstice
Equinox
Revolution
Rotation

The reason for day & night on Earth.
The reason for seasons on Earth.

1 Moon Cycle = approx. _______ days

1 Year on Earth = _________ days

Earth tilts on its axis at _________°

________________________ is the only star that does not move in the night sky!

Our Sun is __________________ times larger in volume than the Earth.

Earth's rotation causes all objects in the sky (sun, planets, stars, moon) to move _________ → __________.
